

Leading the line of elegance.
The new SieMatic SLX PURE.

SieMatic

As the inventor of the handle-free kitchen,
we faced a formidable challenge:
Could we improve an icon even further?

The result is a homage to a philosophy of design:
Handle-free, re-defined.
Simplicity, taken one step further.
Timelessness, interpreted for our times.

Feel. Weightlessness. Light. Transparency.
A kitchen concept that sets new standards:
The new SieMatic SLX PURE.

Grasping a new world.

WITH THE NEW HANDLE-FREE SIEMATIC SLX PURE, grasping becomes a basic aesthetic principle. At the heart of the new concept lies the re-designed recessed grip combined with the delicate proportions of just 6.5 millimeters. The perfect angle, the pleasing structure of the handle channel, the refined materials bring tactile properties to the forefront – and are precisely what makes this kitchen such an eye-catcher, too.

Intelligent simplicity.

In the style collection PURE, omission becomes an art form and simplicity an expression of refinement.

The new SieMatic SLX PURE follows this principle, too. The generous, skilled treatment of surfaces and materials coupled with practically invisible functional elements, such as this countertop with flush-mounted basin in Ceramic Storm Negro, prove it: Only intelligent solutions enable true purism.

The delicate proportions, expressed above all through the slimline 6.5 mm thickness of the floating countertop, continuous recessed grip and sophisticated contours, play a key role in defining the unique design philosophy of the new SieMatic SLX PURE.

Ulrich W. Siekmann,
CEO SieMatic Möbelwerke

Pioneering lines.

In the new SieMatic SLX PURE, light and lines unite in a unique symbiosis. The lighting strips subtly integrated into the shadow gap of the recessed grip are a key design element. They create a special three-dimensional effect on smooth surfaces, enhance the floating impression of the countertop and emphasize the balanced proportions. With individually controllable light temperature and brightness, the LED light has a direct influence on the atmosphere of the room – and the mood of its users.

Harmonious contrast.

THE LIGHTING STRIPS can be installed both vertically or horizontally to create eye-catching accents. They reveal their striking effect particularly when combined with dark nuances, like here with the matte *"Graphite Gray"* veneer, recessed grips and handle channels in *"Gold Bronze Anodized Aluminum"* and the countertop in *"Ceramic Storm Negro"*.

Weightless design.

The unbelievable lightness inherent to the new SieMatic SLX PURE is especially apparent in the luxurious glass cabinets with pull-outs mounted on the back panel, which appear to be floating in space. Kitchen and living area merge to form one harmonious whole thanks to transparent doors and side panels and the variably positionable glass shelves. With the delicate aluminum frames in anodized matte black, gold bronze or stainless steel, coupled with sensitively placed lighting elements, they become the crown jewels of the room.

Freedom with personality.

THROUGH THE GENEROUS USE OF TRANSPARENT SURFACES, visual features assume special significance. Such as the delicate metal frame above with elegant handle in *“Anodized Gold Bronze”* and the harmoniously tinted glass walls in *“Parsol Bronze”*. Or the pull-outs on the right in *“Oak Hazel Brown”* veneer and the back panel in *“Herringbone Tarsie”* veneer. The customized design options for the glass wall cabinets are equally spectacular. They include the entire SieMatic material portfolio and color palette, in addition to the same floating principle as the SieMatic FloatingSpaces.

Kitchen or home furnishings?

Everyone can answer this question entirely as they please – after all, the small glass wall cabinets can be used however you wish, whether as freestanding furniture, a flowing transition into the living area or an eye-catcher at the heart of the kitchen. The back panel can be refined with a mirrored surface, a herringbone veneer or one of the SieMatic SLX PURE veneers or lacquers. Subtly tinted to match the aluminum elements, the glass surfaces catch the eye from every angle, creating the perfect stage for their contents.

Stunning storage.

THE EXCEPTIONAL FINISH OF THE FLOATING PULL-OUTS isn't just impressive because of its looks. Inside, it reveals an intricately designed interior, with ample space for useful aids and elegant silverware alike. After all, together with the SieMatic interior design systems in wood or aluminum and like all drawers and pull-outs in the new SieMatic SLX PURE, they offer extraordinary freedom of design.

Perfect variety

THE DESIGN OF THE SIEMATIC SLX PURE embodies variety. This is why this kitchen's play on contrasts is particularly pleasing: The kitchen island in *"Agate Gray"* and *"Ceramic Pietra Di Luna Silk"* countertop with a visible thickness of just 6.5 mm. Half-height, closed wall cabinets in dark matte lacquer with anti-fingerprint coating in *"Graphite Gray"*, the 8 mm-thick light ceramic countertop and glass cabinets that echo the color of the island. An artful interplay that impresses at every glance.

Harmonious details.

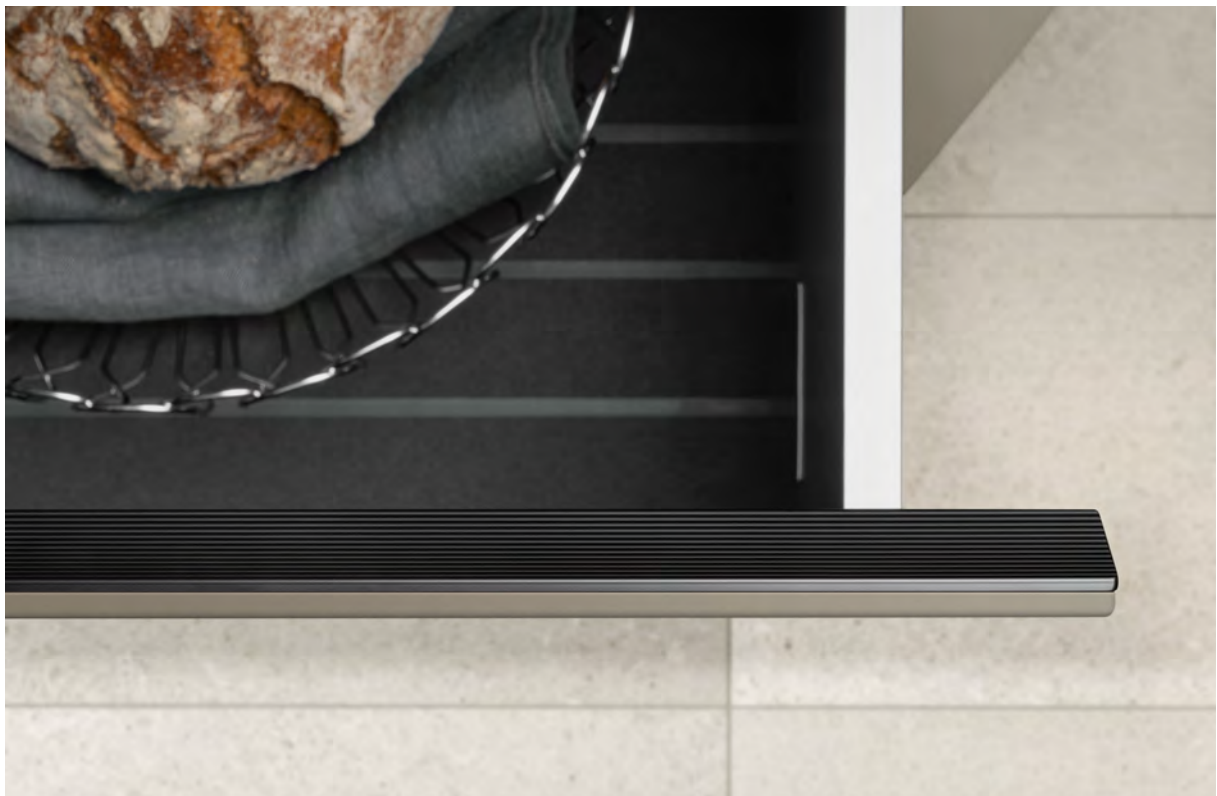

THE EXQUISITE SURFACES, seamlessly perfect corners and angles, the play on forms echoing the recessed grips – the pull-outs attest to the harmonious unification of machine production and skilled craftsmanship. The perfectly mitered pull-outs appear practically seamless when closed and stand as a true representation of the exceptional workmanship of the new SieMatic SLX PURE.

A reflection of your style.

A COMPREHENSIVE RANGE OF LIGHT NUANCE enhances the popular kitchen color white and offers even more opportunities for individual expression. This gives way to exciting yet homely compositions, such as the light-colored countertop in *“Ceramic Pietra Di Luna Silk”* and the lacquered surfaces in *“Pebble Gray Matte”*, which creates a striking contrast to the sophisticated *“Smoked Oak”* veneer.

A reflection of your style.

BY OFFERING YOU CUSTOMIZED FREEDOM OF DESIGN, every SieMatic SLX PURE is unique. The plethora of materials, surfaces and colors forms the basis of your interior and kitchen design. Whether tone-on-tone or with contrasting touches, an elegant veneer or striking metal. Whether satin matte or high-gloss lacquer in up to 1,950 special colors. Whether delicate or solid. Every composition yields a harmonious overall concept. And that, too, is unique.

Quality is the best form of sustainability.

We have always felt a deep sense of responsibility towards our environment and future generations. This is why strict environmental regulations have always been a matter of course in the development of our products, the selection of our materials, our transport routes and the production of our kitchen furniture. They often go far beyond the standard for the industry. We regularly have them checked and certified by neutral and reputable bodies, from the stringent FSC certification to the high standards of the US CARB II standard (TSCA Title VI).

DUT WE ALSO MAKE AN EQUALLY IMPORTANT CONTRIBUTION to sustainability with our high quality standard. Every SieMatic kitchen that leaves our factory is built for decades of use. This starts with even the tiniest screw and hinge, which have to pass the toughest load tests in our own testing laboratory. And it culminates in the timeless design of our kitchens, which transcends generations and thus sustainably conserves resources.
